

Volvo TWD1643GE diesel engine

Newage/Stamford HCI544F alternator

Standard Generator Features

- AMF, Automatic mains failure unit
- Heavy duty type, 6 cylinder, water cooled engine
- ♦ 55°C tropical type radiator
- ♦ Starter motor
- ♦ Lead acid battery
- ♦ Charging alternator
- ♦ Battery charge redressor
- Heavy duty, brushless type alternator
- ♦ Base frame with anti-vibration units
- Industrial type silencers
- ♦ Flexible exhaust compensator
- ♦ Block water heater unit
- Control panel with digital-automatic main control module
- Fan, fan drive, charging alternator drive and all rotating parts covered
- Radiator matrix covered by metal mesh against the mechanical damages
- Fabricated and welded steel base frame
- Anti-vibration mountings
- \diamond Engine and alternator manufacturer test reports
- ♦ Factory load, performance and function tests

Optional Features

- ◆ Automatic load transfer panel
- Automatic syncronization and power sharing systems
- ♦ Soundproof canopy
- Container type enclosers
- ♦ Road trailer
- ♦ Job-site trailer
- Protection circuit breaker
- ♦ Air start
- ♦ Remote type radiator
- ♦ Base fuel tank
- External type fuel tank
- Automatic fuel transfer system
- Residential silencer

Volvo TWD1643GE Engine

Standard Features

The TWD1643GE is a powerful, reliable and economical Generating Set Diesel built on the dependable in-line six design.

Durability & low noise

Designed for easiest, fastest and most economical installation. Well-balanced to produce smooth and vibration-free operation with low noise level.

To maintain a controlled working temperature in cylinders and combustion chambers, the engine is equipped with piston cooling. The engine is also fitted with replaceable cylinder liners and valve seats/guides to ensure maximum durability and service life of the engine.

Low exhaust emission

The state of the art, high-tech injection and charging system with low internal losses contributes to excellent combustion and low fuel consumption.

The TWD1643GE fulfils EU Stage 2 exhaust emission levels

Easy service & maintenance

Easily accessible service and maintenance points contribute to the ease of service of the engine.

Engine and Block

- Optimized cast iron cylinder block with optimum distribution of forces without the block being unnessarily heavy.
- Wet, replaceable cylinder liners
- Piston cooling for low piston temperature and reduced ring temperature
- $\diamond \mathsf{Tapered}$ connecting rods for reduce risk of piston cracking
- Crankshaft induction hardened bearing surfaces and fillets with seven bearings for moderate load on main and high-end bearings
- Case hardened and nitrocarburized transmission gears for heavy duty operation
- ♦Keystone top compression rings for long service life
- Viscous type crankshaft vibration dampers to withstand single bearing alternator torsional vibrations
- ♦Replaceable valve guides and valve seats
- Over head camshaft and four valves per cylinder

Cooling System

Type Tropical, heavy duty type

Ambient temperature, °C 55
Engine+Radiator coolant cap., Liters 128
Jacket coolant flow, Liters / sec 4.8

- New TWD-cooling system with optimized priority and cold charge air coolers
- ♦Two water cooled charge air coolers
- Efficient cooling with accurate coolant control through a water distribution duct in the cylinder block. Reliable sleeve thermostat with minimum pressure drop
- ♦Coolant filter as standard

Fuel System

Type of injection system Direct injection

Fuel injecter Electronic unit injector

Governor type Volvo / EMS 1

- ♦Non-return fuel valve
- ♦Fuel prefilter with water separator and water-in-fuel indicator / alarm
- ♦Gear driven low-pressure fuel pump
- ♦Fine fuel filter with manual feed pump and fuel pressure switch
- ◆Fuel shut-off valve

Engine Management System 2 (EMS2), an electronically controlled processing system which optimizes engine performance. It also includes advanced facilities for diagnostics and fault tracing

•The instruments and controls connect to the engine via the CAN SAE1939 interface, either through the Control Interface Unit(CIU) or the Display Control Unit(DCU)

*Sensors for oil pressure, oil temp, boost pressure, boost temp, coolant temp, fuel temp, water in fuel, fuel pressure and two speed sensors.

Newage/Stamford HCI544F Alternator

Standard Features

Winding&Electrical Performance

All generator stators are wound to 2/3 pitch. This eliminates triplen (3rd, 9th, 15th...) harmonics on the voltage waveform and is found to be the optimum design for trouble-free supply of non-linear loads. The 2/3 pitch design avoids excessive neutral currents sometimes seen with higher winding pitches, when in parallel with the mains. A fully connected damper winding reduces oscillations during paralelling. This winding, with the 2/3 pitch and carefully selected pole and tooth designs, ensures very low waveform distortion.

SX440 AVR

With this self-excited system the main stator provides power via the Automatic Voltage Regulator (AVR) to the exciter stator. The high efficiency semi-conductors of the AVR ensure positive build-up from initial low levels of residual voltage.

The exciter rotor output is fed to the main rotor through a three-phase full-wave bridge rectifier. The rectifier is protected by a surge suppressor against surges caused, for example, by short circuit or out-of-phase paralleling.

The SX440 will support a range of electronic accessories, including a 'droop' Current Transformer (CT) to permit parallel operation with other ac generators. If 3-phase sensing is required with the self-excited system, the SX421 AVR must be used.

Terminals&Terminal Box

Standard generators are 3-phase reconnectable with 12 ends brought out to the terminals, Which are mounted on a cover at the non-drive end of the generator. A sheet steel terminal box contains the AVR and provides ample space for the customers wiring and gland arrangements. It has removable panels for easy access.

Shaft&Keys

All generator rotors are dynamically balanced to better than BS6861:Part 1 Grade 2.5 for minimum vibration in operation. Two bearing generators are balanced with a half key.

Insulation / Impregnation

The insulation system is class 'H'

All wound components are impregnated with materials and processes designed specifically to provide the high build required for static windings and the high mechanical strength required for rotating components.

Standards

Newage Stamford industrial generators meet the requirements of **BS EN** 60034 and the relevent section of other international standards such as **BS5000,VDE0530, NEMA MG1-32, IEC34, CSA C22.2-100, AS1359**Other standards and certifications can be considered on request

Quaility Assurance

Generators are manufactured using production procedures having a quality assurance level to BS FN ISO 9001

Deepsea 5220 Control Module

Description

- ♦The model 5220 is an Automatic Mains Failure Control module.
- •The modul is used to monitor a mains supply and automaticlly start a standby generator set.
- ∘The module also provides indication of operational status and fault conditions automaticly shutting down the genset and indicating failures by means of an LCD display, and appropriate flashing LED on the front panel.
- Selected timers and alarms can be altered by the user from the front panel.
- Alterations to the system are made using the 810 interface and a PC. This interface also provides real time diagnostic facilities

Specifications

- ♦240mm x 172mm dimensions
- ♦70mm x 40mm dimensions, 4 segment grafical LCD monitor
- ♦Developed 16-bit Microprocessor design
- ◆Easy comprehended display (Hid-Til-Lit SMD LED technology)
- ◆LED mimic diagram
- ♦SMS messaging capability with suitable GSM Modem
- PC software is MS Windows based and allows the operator to control the module from a remote location (P810 Software Kit necessary)
- ◆Easy pushbutton controls
- System parameters can be adjusted manually from the front panel
- ⋄kVA,kW ve Cosφ measurements
- ◆Communication with MODEM

Information

Power Ratings

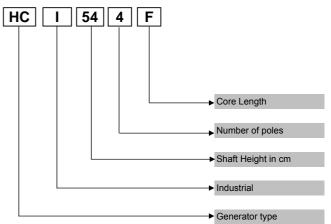

Standby power rating is for the supply of emergency power at variable load for the duration of the non-avalaibality of the mains power supply. No overload capacity is available at this rating. A standby rated engine should be sized for an avarage load factor of 80% based on published standby rating for 500 operating hours per year. Standby ratings should never be applied except in true emergency power failure conditions.

Prime power rating is available for unlimited hours per year with a variable load of which the average engine load factor is 80% of the published power rating, incorporation of a 10% overload for 1 hour in every 12 hours of operation which permitted

Continuous power rating is available for continuous full load operation.No overload is permitted.

Acc. to ISO 3046/1, BS 5514, DIN6271
