## e-HM™ SERIES GENERAL INTRODUCTION

Our customers are central to our business.

Many years of collaboration with them across the different markets and all over the world has taught us that the Building Services market requires specific pump design to meet the challenge of the energy saving and the industrial segments need customized and reliable compact pumps to ensure top performance of the systems and continuous quality of the production.

Therefore Lowara has developed a wide range of horizontal multistage pumps, the e-HM™, to give an appropriate and dedicated solution to special applications and installations in the industry and in the building services market.

### Pump design

The e-HM™ is a non-self-priming, end-suction horizontal multistage, high pressure centrifugal pump, with axial threaded inlet and radial threaded outlet. The pumps are close-coupled design and are equipped with non-standard Lowara motors. The e-HM™ is equipped with mechanical seal.

The e-HM™ are highly modular pumps that are fitted with an innovative hydraulic design that secures high efficiency performances and an increased Mean Time Between Failure.

The e-HM™ is available in two different configurations:

- "Compact" design for sizes 1HM, 3HM and 5HM up to maximum 6 stages
- "Sleeve" design for sizes 1HM, 3HM and 5HM starting 7 stages and above; any models of 10HM, 15HM and 22HM.

The "Compact" design is made of one single piece fabricated stainless steel pump body directly connected to the motor flange. The "Compact" has only one O-ring for the sealing of the casing that clearly reduces the leakages possibilities.

The "Sleeve" design is made of an external stainless steel TIG welded sleeve and of separate suction casing kept together with the mean of an aluminum casted pump bracket and of stainless steel tie rods screwed in the motor flange.

The e-HM™ is available in three different material execution:

- HM..P: Stainless steel pump body (EN 1.4301/ AISI 304) with Noryl™ impeller for sizes 1HM, 3HM, 5HM and 10HM to maximum 6 stages.
- HM..S: full stainless steel (EN 1.4301/ AISI 304) – any models.
- HM..N: full stainless steel (EN 1.4401/ AISI 316) – any models.

### Motor

The e-HM™ are equipped with Lowara designed and manufactured surface motors in accordance with EN standards.

The e-HM™ series can be equipped as well with Lowara variable speed drivers such as the Teknospeed and the Hydrovar™.

### Range declination

The e-HM™ series are available as:

- Single pump
- Variable speed system with Lowara Teknospeed variable driver embedded.

## SERIE e-HM™

### APPLICATIONS, BENEFITS – BUILDING SERVICES

The e-HM™ series and the different available configurations have been designed to cover a wide range of applications in the residential and small commercial building services from the water supply to pressure boosting as well as heating and cooling applications.

#### Applications

The e-HM™ series could be installed both in single private-own house and in small/medium residential buildings.

The e-HM™ series will be as well your preferred choice for water supply and pressure boosting in small block offices and shops. The e-HM™ series could be finally installed as well for small/medium irrigation installation.

#### Benefits

**Payback:** Installing the e-HM™ series guarantee a very short payback period as the premium efficiency makes the e-HM™ the lowest energy consuming fixed speed pump on the market.

Combined with Teknospeed makes the pump paying for itself in very quickly. (43% of reduced operating cost per year).

**Reliability:** The e-HM™ series secures as well reliable operations over time thanks to its robust and innovative design. This could be increased with the installation of the Teknospeed: variable speed operation reduces mechanical stress on the pump components and water hammering during stopping.

**Comfort:** The e-HM™ series guarantee as well an increased user comfort thanks to very silent operation. The combination of the e-HM™ series with the Teknospeed will secure constant pressures at any points of water in your building and constant temperatures even when other taps are opened!

**For the installers**, the e-HM™ series are easy to install and the best choice for the end user in term of energy savings. The combination of the e-HM™ with the Teknospeed is the guarantee of quick and easy installation as the system is supplier with cable, plug and pressure transmitter. Only small vessels are required.

#### Features

- Compact design with best-in class performances.
- Wide range of performances with 6 sizes and flow up to 28m³/h.
- Nominal pressure up to 10 bars with Noryl™ impellers and 16 bars with stainless steel impellers.
- Versatile design of the smaller sizes (up to 5HM).
  - Compact version with Noryl™ impellers for restricted space installation.
  - High efficiency version with stainless steel impellers when energy saving is a must.
- Robust and silent design of the larger sizes (from 10HM to 22HM) due the sleeve configuration.
- IE3 Lowara manufactured motors: high performances and silent operations.
- Stainless steel material for pump body and main components in contact with the pumped liquid.
- "Essential O-ring design" that highly reduces the sealing weaknesses (1 O-Ring for Compact, 2 for Sleeve).

## e-HM™ SERIES

### APPLICATIONS, BENEFITS – INDUSTRY

The e-HM™ series and the different available configurations and standard options have been designed to cover a wide range of applications in industry from washing and cleaning machines, to cooling and heating applications, thru water treatment and filtration processes, food and beverage and pharmaceutical applications.

#### Applications

The e-HM™ series could be installed either in machines where compactness and high performances are a must or within industrial processes where the user looks for a reliable modular design with a restricted vertical footprint.

The e-HM™ series offers as well a wide range of standard options to fit every single requirement coming from the industry. The different material and configuration available allow e-HM™ series working with a wide range of liquid temperature starting -30°C to +120°C.

#### Benefits

**Reliability:** The e-HM™ series have been design to withstand heavy duty applications in Industry. For instance, e-HM™ balanced impeller helps decreasing the axial thrust withstand by the motor bearing extending its life time; pump body thickness has been increased by 20% to support heavy duty operation.

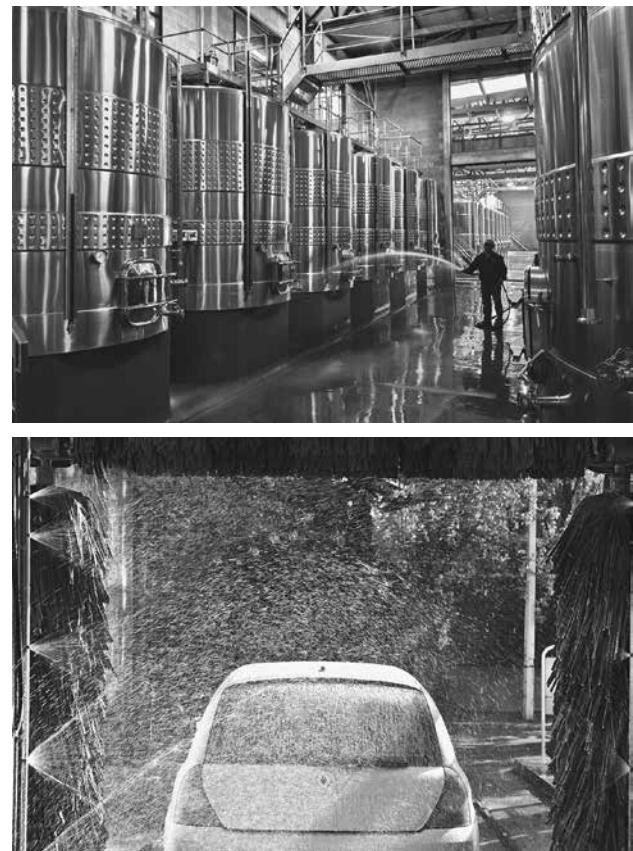

**Versatility:** The e-HM™ series have been designed to be modular, offering two different mechanical configurations (Very compact or highly efficient design) and multiple material executions (from Noryl™ impeller and AISI 304 pump body to full AISI 316 execution) and surface treatment (electropolishing and passivation). Multiple standard options make e-HM™ fitting in many different applications.

**Performances:** The e-HM™ series provide best-in class efficiency up to 72% that means 30% energy saving in average compare to similar pump design from the market. The e-HM™ series will be clearly your preferred choice to meet any efficiency requirements or simply to save money in your installation and processes.

**A global platform:** the e-HM™ series are assembled in different factories across the world to make e-HM™ always closer to our customers. Beyond our commitment to reduce the carbon footprint of e-HM™, this global platform secure that the same design is available everywhere with the same quality processes.

#### Features

- Wide range of performances with 6 sizes, flow up to 28m<sup>3</sup>/h, pressure up to 160 meters.
- Nominal pressure up to 10 bars with Noryl™ impellers and 16 bars with stainless steel impellers
- More than 85% of the range has the same suction height (90mm) for easy installation or system upgrade.
- Wide range of temperatures for pumped liquid: -30°C to +120°C.
- Wide range of voltages for worldwide applications.
- Naturally born with full UL/CSA listed motor: 230/460V 60 Hz with 9 pins control box.
- "Essential O-ring design" that highly reduces the sealing weaknesses (1 O-Ring for Compact, 2 for Sleeve).
- IE3 Lowara manufactured motors: high performances and silent operations.

The table show the mean sound pressure (Lp) measured as per Curve A (Standard ISO 1680).

Noise values were measured with the 50 Hz motor running idle with a tolerance of 3 dB (A).

**STORAGE AND TRANSPORT TEMPERATURE**

-40°C to +60°C.

**e-HM™ SERIES****High efficiency  
horizontal  
multistage  
pump****MARKET SECTORS**

BUILDING SERVICES.  
INDUSTRY.

**APPLICATIONS**

Pressure boosting and water supply systems.  
Washing and cleaning industry including vehicles washing.  
Circulation of hot and cold liquids (like water, water and glycol) for heating, cooling and conditioning systems.  
Water treatment applications.  
Handling of moderately aggressive liquids.  
Food & beverage industries.

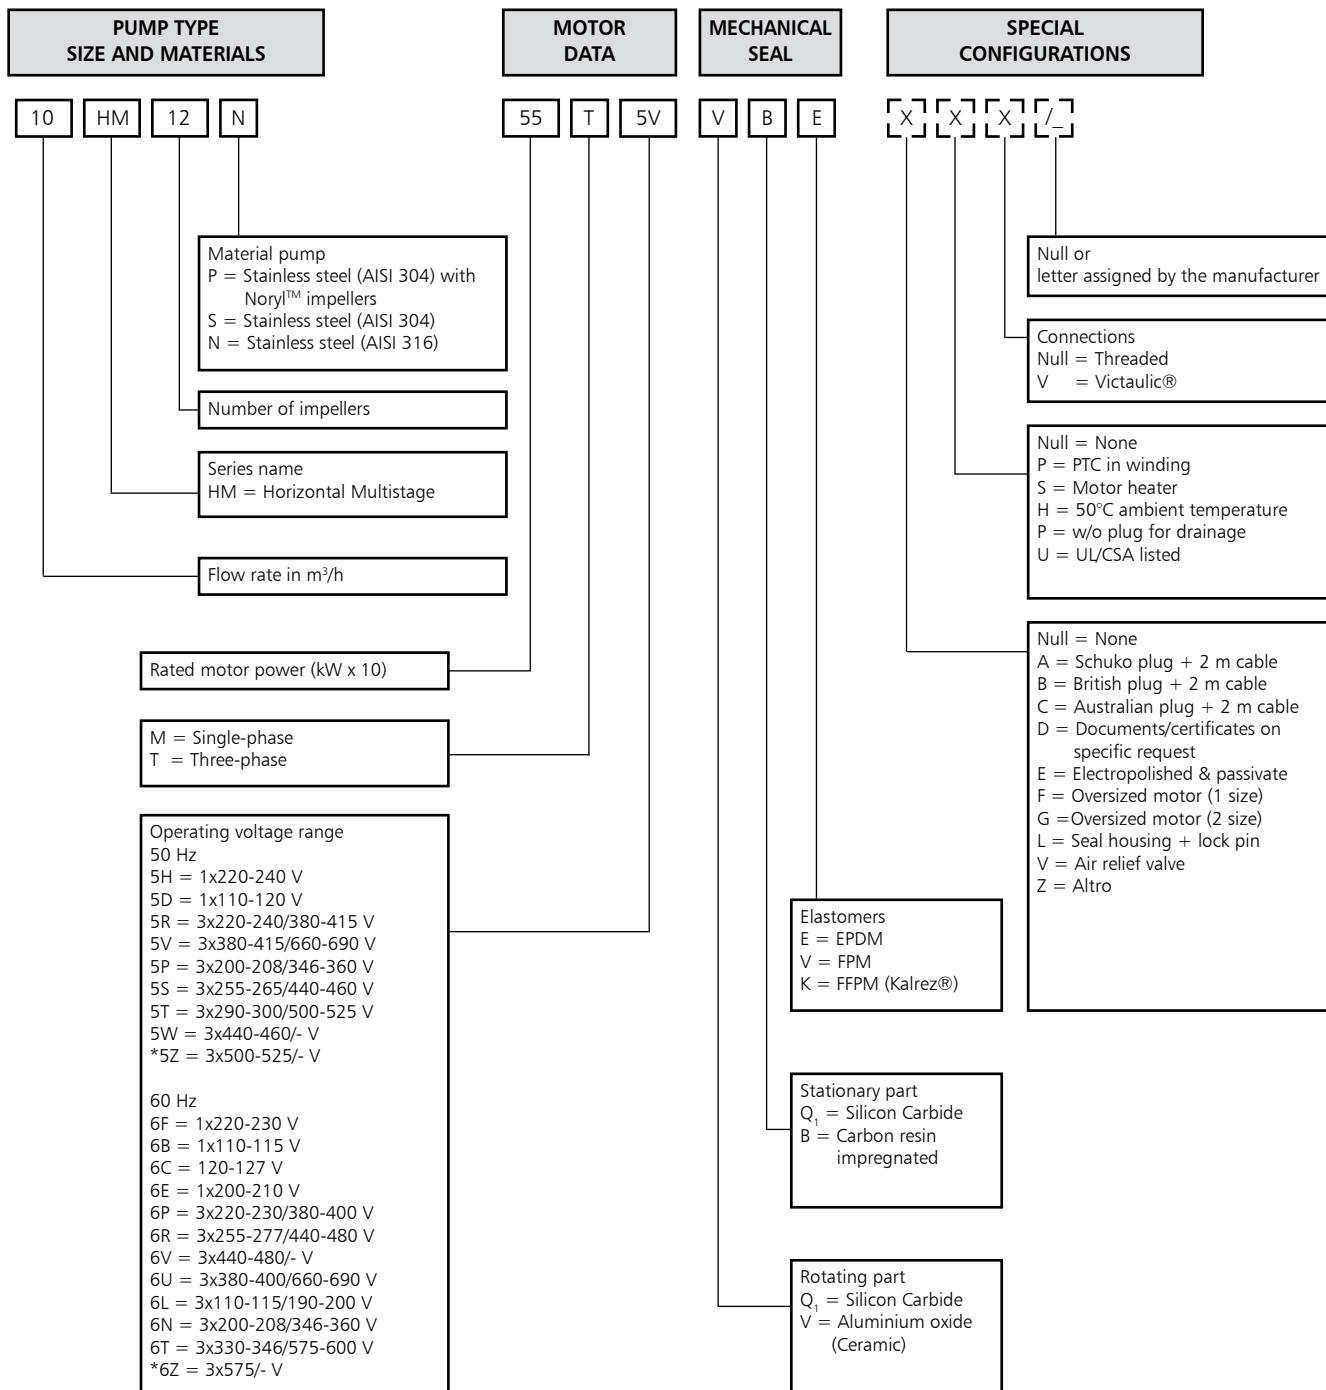

**SPECIFICATIONS****PUMP**

- Flow rate: up to 29m<sup>3</sup>/h.
- Head: up to 160 m.
- Ambient temperature:
  - Three-phase motor versions from -30°C to +50°C.
  - Single-phase motor versions from -30°C to +45°C (from -30°C to +40°C for 0,95 kW motor).
- Temperature of the pumped liquid:
  - +90°C for versions with three-phase motor uses as EN60335-2-41.
  - +120°C for versions with three-phase motor and stainless steel impeller (HM..S, HM..N) uses other than EN60335-2-41.
  - +60°C for versions with single-phase motor.
- Maximum operating pressure:
  - 10 bar (PN 10) for pumps with Noryl™ impeller.
  - 16 bar (PN 16) for pumps with stainless steel impeller and Q1BEGG or Q1Q1EGG mechanical seal (maximum liquid temperature +90°C).
- Connections: Rp threaded for both suction and discharge manifold.
- Hydraulic performances compliant with ISO 9906:2012 - Grade 3B.

**MOTOR**

- Electric short-circuit squirrel-cage motor (TEFC), enclosed construction, air-cooled, 2-pole:
  - Three-phase, efficiency class IE3 (compliant with Regulation (EC) n. 640/2009 and IEC 60034-30).
  - Single-phase version up to 2,2 kW (with built-in automatic reset overload protection).
- Protection class IP55.
- Insulation class 155 (F).
- Performances according to EN 60034-1.
- Standard voltage:
  - Single-phase: 220-240V, 50 Hz.
  - Three-phase: 220-240/380-415V, 50 Hz up to 3 kW.  
380/415/660-690V, 50 Hz from 4 kW included.

## e-HM™ SERIES IDENTIFICATION CODE

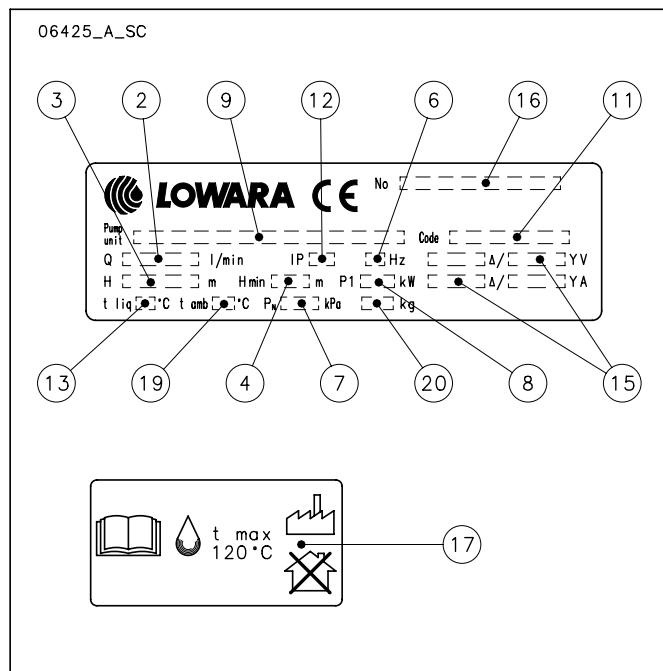

EXAMPLE: 10HM12N55T5VQBE

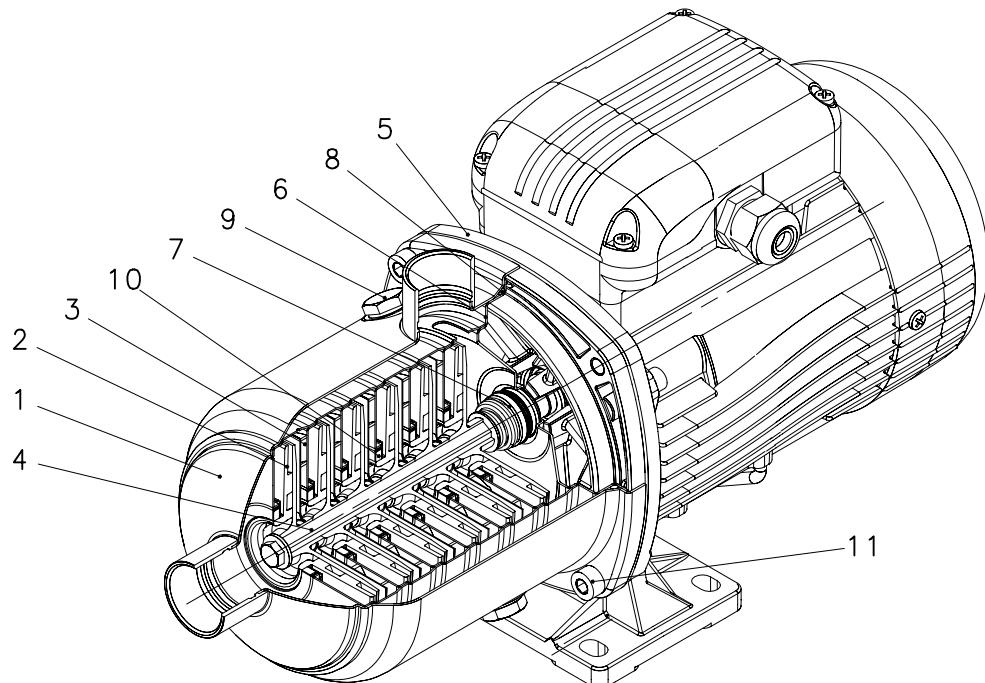

HM series electric pump, flow rate 10 m<sup>3</sup>/h, number of impellers 12, N version (AISI 316), rated motor power 5,5 kW, three-phase 50 Hz, voltage 380-415/660-690 V, Silicon/Carbide/EPDM mechanical seal.

\* For uses other than EN 60335-2-41.

For special configurations please contact the sales network.

tab-comp-hm-en\_a\_tm

The above table indicates the compatibility of materials depending on the pumped liquid.

Check the specific weight of the liquid or the viscosity as this could affect the power input of the motor and hydraulic performance. For further details, please contact the sales network.

## e-HM™ SERIES MOTORS

With the "Energy using Products" (EuP 2005/32/EC) and "Energy related Products" (ErP 2009/125/EC) directives, the European Commission has established requirements for promoting the use of products with low power consumption.

The various products considered include three-phase, 50 Hz surface motors, with power outputs ranging from 0,75 to 375 kW, also when integrated with other products, with characteristics as defined by the specific **Regulation (EC) n. 640/2009** implementing the requirements of the EuP and ErP Directives which also establish the following deadlines:

from	kW	minimum level of efficiency (IE)
16th June 2011	0,75 ÷ 375	IE2
1st January 2015	< 7,5	IE2
	7,5 ÷ 375	IE3 IE2 fitted with variable speed drive
1st January 2017	0,75 ÷ 375	IE3 IE2 fitted with variable speed drive

- **Standard three-phase surface motors**  
**≥ 0,75 kW supplied as IE3.**
- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- IP55 protection degree.
- Insulation class 155 (F).
- Electrical performances according to EN 60034-1.
- IE efficiency according to EN 60034-30 ( $\geq 0,75$  kW).
- Cable gland with metric according to EN 50262.

- **Single-phase** version:  
220-240 V 50 Hz  
Built-in automatic reset overload protection up to 2,2 kW. For higher powers the protection must be provided by the user.
- **Three-phase** version:  
220-240/380-415 V 50 Hz for power up to 3 kW.  
380-415/660-690 V 50 Hz for power above 3 kW.  
Overload protection to be provided by the user.

**22HM..S - 22HM..N SERIES**
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

These performances are valid for liquids with density  $\rho = 1.0$  Kg/dm<sup>3</sup> and kinematic viscosity  $\nu = 1$  mm<sup>2</sup>/sec.

**TKS/e-HM™ SERIES**

**High efficiency  
horizontal  
multistage  
pump**

**TKS  
Teknospeed  
variable speed  
systems**

**MARKET SECTORS**

BUILDING SERVICES.  
INDUSTRY.

**APPLICATIONS**

Pressure boosting and water supply systems.  
Open or close industrial systems.

**SPECIFICATIONS****TKS SYSTEM**

- Single-phase power supply 230V +/- 10%, 50/60 Hz.
- Coupled to Lowara SM motors up to 1,1 kW three-phase.

**PUMP**

- Flow rate: up to 8,5 m<sup>3</sup>/h.
  - Head: up to 130 m.
  - Ambient temperature: from 0°C to +40°C.
  - Temperature of the pumped liquid up to 40°C ambient temperature.
    - +90°C for pumps with Noryl™ impeller.
    - +120°C for pumps with stainless steel impeller.
  - Maximum operating pressure:
    - 10 bar (PN 10) for pumps with Noryl™ impeller.
    - 16 bar (PN 16) for pumps with stainless steel impeller and Q1BEGG or Q1Q1EGG mechanical seal (maximum liquid temperature +90°C).
  - Connections: Rp threaded for both suction and discharge manifold.
  - Hydraulic performances compliant with ISO 9906:2012 - Grade 3B.
- For other specifications, refer to the standard product.

**MOTOR**

- Electric short-circuit squirrel-cage motor (TEFC), enclosed construction, air-cooled, 2-pole:
  - Three-phase, efficiency class IE3 (compliant with Regulation (EC) n. 640/2009 and IEC 60034-30).
- Protection class IP55.
- Insulation class 155 (F).
- Performances according to EN 60034-1.
- Standard three-phase voltage: 220-240/380-415V, 50 Hz up to 3 kW.

**TKS SERIES**
**TECHNICAL DATA  
FOR FREQUENCY  
CONVERTER  
UNIT**

**ELECTRICAL DATA**

<b>POWER INPUT</b>	230V +/- 10% 1~ 50/60 Hz
<b>INPUT CURRENT</b>	6,8 A
<b>OUTPUT VOLTAGE</b>	230V 3~ variable according to the V/F curve (motor connected to 230V)
<b>OUTPUT CURRENT</b>	4,6 A
<b>OUTPUT FREQUENCY</b>	Variable 12÷50 Hz in the speed adjustment mode Variable 15÷50 Hz in the constant pressure control mode
<b>RECOMMENDED MOTORS</b>	Max Lowara SM motor 1.1 kW 3~ max. overcurrent 5%
<b>PRESSURE TRANSMITTER</b>	4÷20 mA standard with two power
<b>ALARM RELAY</b>	NC (normally closed) contact 1A 230 Vac resistive load; positive logic operation (the contact is open if there are no alarm). It closes in the event of alarm or no power input).
<b>MODULATION TYPE</b>	PWM (Pulse Width Modulation)
<b>CONTROL TYPE</b>	PI (Proportional factor – Integral factor)
<b>LINE PROTECTION (recommended)</b>	Magneto-thermal switch 16A curve-type C
<b>POWER CABLE</b>	minimum cross-section 1.5 mm <sup>2</sup>
<b>PFC (POWER FACTOR CONTROLLER) CIRCUIT</b>	This circuit absorbs sinusoidal current from the power input line, thereby ensuring the product complies with the EN 61000-3-2 standard: this is an indispensable requirement for complying with the EMC (Electromagnetic compatibility) Directive. It also guarantees a constant set outlet pressure if the input voltage varies (within the permitted range 230V +/- 10%).

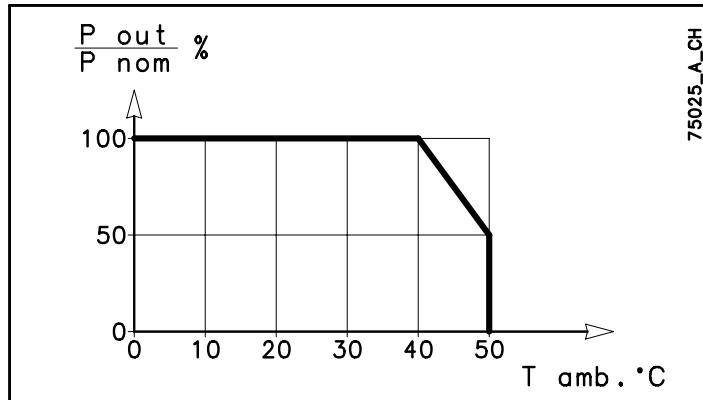

**MECHANICAL DATA**

<b>PROTECTION</b>	IP55
<b>RECOMMENDED MOTORS</b>	Direct with standard Lowara SM motor terminal boards
<b>RADIATOR MATERIAL</b>	Die-cast aluminium
<b>RADIATOR COLOUR</b>	Black

**OPERATING RANGE**

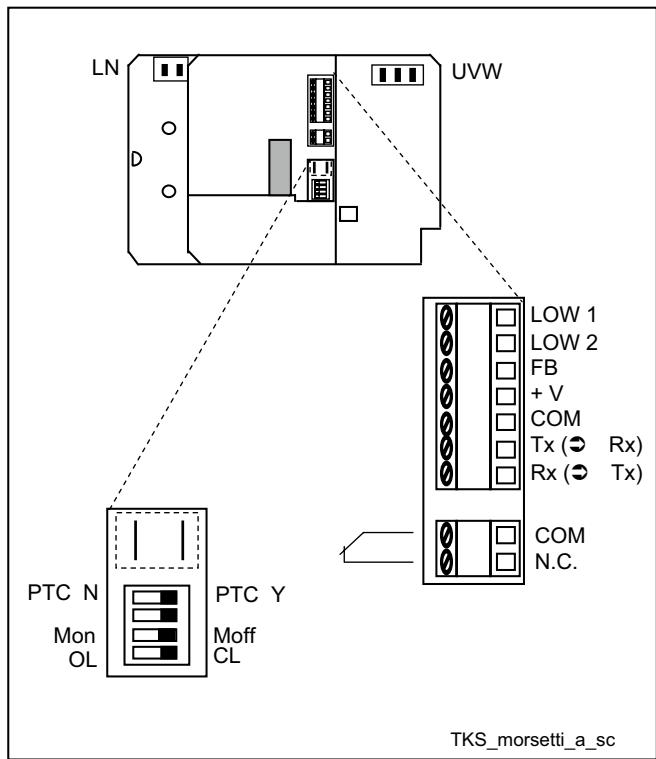

<b>*AMBIENT TEMPERATURE</b>	0÷40 °C
<b>MAX. HUMIDITY (WITHOUT CONDENSATION)</b>	95 %

\*For higher temperatures, please see derating curve

**DERATING CURVE**

## TKS SERIES

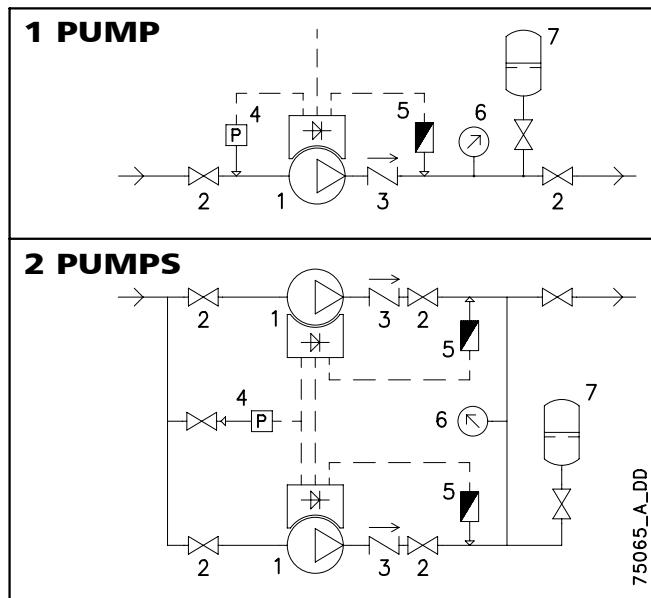

### WIRING DIAGRAM

### LEGEND

REF.	DESCRIPTION
LN	230V single-phase power input
UVW	230V three-phase motor power input
LOW 1	Float switch input
LOW 2	Float switch input
FB	Pressure transmitter signal
+ V	Pressure transmitter power input
COM	Common serial line
TX	Serial signal
RX	Serial signal
COM	Common relay contact
N.C.	Normally closed relay contact
<b>MICROSWITCHES</b>	
PTC N/PTC Y	PTC configuration (Not used)
Mon/Moff	Main pump/Secondary pump
OL/CL	Motor speed adjustment (OL) Pressure control mode (CL)

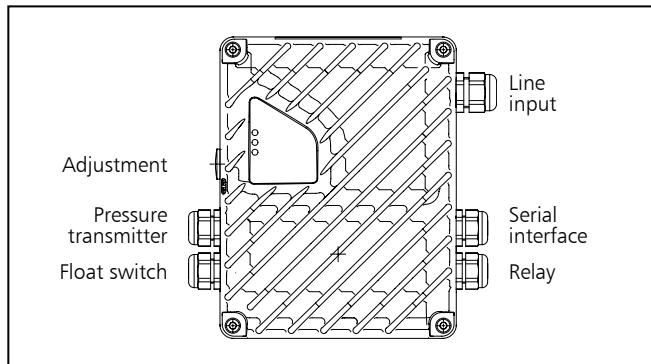

### SYSTEM CONNECTION SCHEME

### LEGEND

REF.	COMPONENT
1	Teknospeed pump
2	On/off valve
3	Check valve
4	Input pressure control
5	Pressure transmitter
6	Pressure gauge
7	Surge tank (5% Qmax)

### INPUTS/OUTPUTS

## TKS SERIES

### MOTOR SPEED ADJUSTMENT

#### OPERATION:

Teknospeed can adjust motor speed in two ways:

##### 1. With a potentiometer

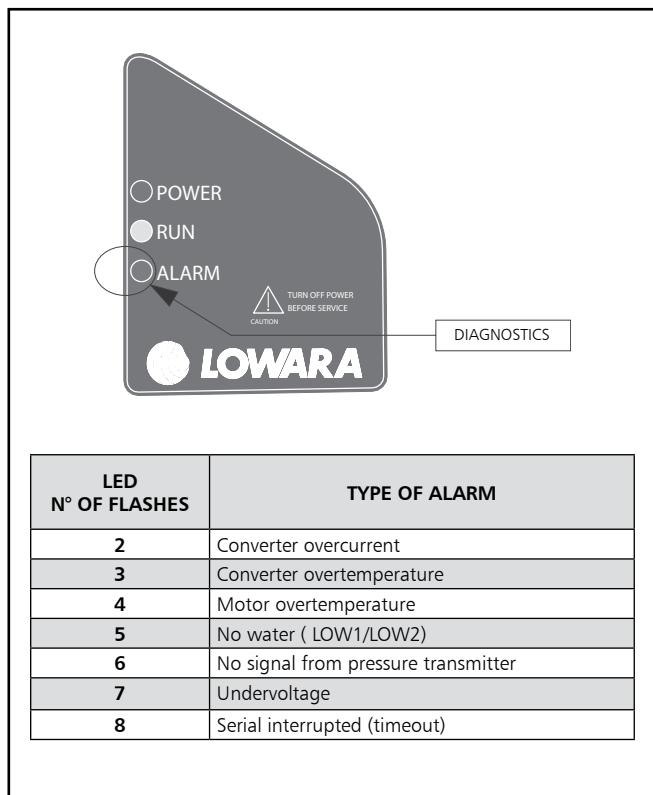

where the halfway position corresponds to a frequency of about 25 Hz (max frequency 50 Hz).

##### 2. With a 4÷20mA signal

at the FB input (proportional speed).

- The LOW1 and LOW2 inputs work as START/STOP (run enable).
- The hydraulic performance of the pump is proportional to the motor speed.

### DIAGNOSTICS

### TYPE OF ALARM

- The number of times the red LED flashes identifies the type of alarm (see table).
- An attempt is made to reset the alarm every 20 seconds; after three unsuccessful attempts, the converter stops.
- If at least 10 minutes elapse after an alarm without any other faults occurring, the reset attempts counter is reset.

### NO WATER ALARM

- In the constant pressure control mode, the opening of the contacts between inputs LOW1 and LOW2 (float switch) generates the no water alarm.
- If the contact is reset, the pump restarts automatically.

# **REPORTS AND DECLARATIONS**

## REPORTS AND DECLARATIONS

### i) Test reports

- a) **Factory Test Report** (Lowara identity code: 1A)  
(not available for all pump types; contact Customer Service in advance)
  - Test report compiled at the end of the assembly line, including flow-head performance test (ISO 9906:2012 – Grade 3B) and tightness test.
- b) **Audit Test Report** (Lowara identity code: 1B)
  - Test report for electric pumps compiled in the test room, comprising flow-head-pump input-pump efficiency performance test (ISO 9906:2012 – Grade 3B)
- c) **NPSH Test Report** (Lowara identity code: 1A / CTF-NP)  
(unavailable for submerged or submergible pumps)
  - Test report for electric pumps compiled in the test room, comprising flow-NPSH performance test (ISO 9906:2012 – Grade 3B)
- d) **Noise Test Report** (Lowara identity code: 1A / CTF-RM)  
(unavailable for submerged pumps)
  - Report indicating sound pressure and power measurements (EN ISO 20361, EN ISO 11203, EN ISO 4871) using the
    - intensimetric (EN ISO 9614-1, EN ISO 9614-2), or
    - phonometric method.
- e) **Vibration Test Report**  
(unavailable for submerged or submergible pumps)
  - Report indicating vibration measurements (ISO 10816-1)

### ii) Declaration of product conformity with the technical requirements indicated in the order

- a) **EN 10204:2004 - type 2.1** (Lowara identity code: CTF-21)
  - does not include test results on supplied or similar products.
- b) **EN 10204:2004 - type 2.2** (Lowara identity code: CTF-22)
  - includes test results (materials certificates) on similar products.
- c) **EN 10204:2004 - type 3.1** (Lowara identity code: 1A / CTF-31 or 1B / CTF-31)
  - includes test report (*Factory Test Report* or *Audit Test Report*), list of materials, EC Declaration of Conformity (in addition to the one accompanying the product), certificates / declarations concerning materials in contact with water.

### iii) Issue of a further EC Declaration of Conformity,

- in addition to the one accompanying the product, it comprises references to European law and the main technical standards (e.g.: MD 2006/42/EC, EMCD 2004/108/EC, ErP 2009/125/EC).

*N.B.: if the request is made after receipt of the product, communicate the code (name) and serial number (date + progressive number).*

### iv) Manufacturer's declaration of conformity

- relative to one of more types of products without indicating specific codes and serial numbers.

### v) Other certificates and/or documentation on request

- subject to availability or feasibility.

### vi) Duplication of certificates and/or documentation on request

- subject to availability or feasibility.

# TECHNICAL APPENDIX

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$hp + h_z \geq (NPSH_r + 0.5) + hf + hp_v \quad ①$$

where:

**hp** is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $hp$  is the quotient between the barometric pressure and the specific weight of the liquid.

**hz** is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.

**hf** is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

**hpv** is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $hp_v$  is the quotient between the Pv vapour pressure and the liquid's specific weight.

**0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature ( $4^\circ C$ ) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

<b>Water temperature (°C)</b>	20	40	60	80	90	110	120
<b>Suction loss (m)</b>	0,2	0,7	2,0	5,0	7,4	15,4	21,5

<b>Elevation above sea level (m)</b>	500	1000	1500	2000	2500	3000
<b>Suction loss (m)</b>	0,55	1,1	1,65	2,2	2,75	3,3

Friction loss is shown in the tables at pages 76-77 of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port. It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at  $\sim 15^\circ C$   $\gamma = 1 \text{ kg/dm}^3$

Flow rate required:  $25 \text{ m}^3/\text{h}$

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SV3G075T pump whose NPSH required value is, at  $25 \text{ m}^3/\text{h}$ , of 2 m.

For water at  $15^\circ C$

$hp = Pa / \gamma = 10,33 \text{ m}$ ,  $hp_v = Pv / \gamma = 0,174 \text{ m}$  (0,01701 bar)

The Hf flow resistance in the suction line with foot valves is  $\sim 1,2 \text{ m}$ .

By substituting the parameters in formula ① with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have:  $6,8 > 3,9$

The relation is therefore verified.

G-at-pct-en\_a\_th

hr = flow resistance for 100 m of straight pipeline (m)

V = water speed (m/s)

## **FLOW RESISTANCE**

### **TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES**

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

ACCESSORY TYPE	DN											
	25	32	40	50	65	80	100	125	150	200	250	
	Equivalent pipeline length (m)											
45° bend	0,2	0,2	0,4	0,4	0,6	0,6	0,9	1,1	1,5	1,9	2,4	2,8
90° bend	0,4	0,6	0,9	1,1	1,3	1,5	2,1	2,6	3,0	3,9	4,7	5,8
90° smooth bend	0,4	0,4	0,4	0,6	0,9	1,1	1,3	1,7	1,9	2,8	3,4	3,9
Union tee or cross	1,1	1,3	1,7	2,1	2,6	3,2	4,3	5,3	6,4	7,5	10,7	12,8
Gate	-	-	-	0,2	0,2	0,2	0,4	0,4	0,6	0,9	1,1	1,3
Non return valve	1,1	1,5	1,9	2,4	3,0	3,4	4,7	5,9	7,4	9,6	11,8	13,9

G-a-pcv-en\_a\_th

The table is valid for the Hazen Williams coefficient C=100 (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect™

Xylect™ is pump solution selection software with an extensive online database of product information across the entire Lowara, and Vogel range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

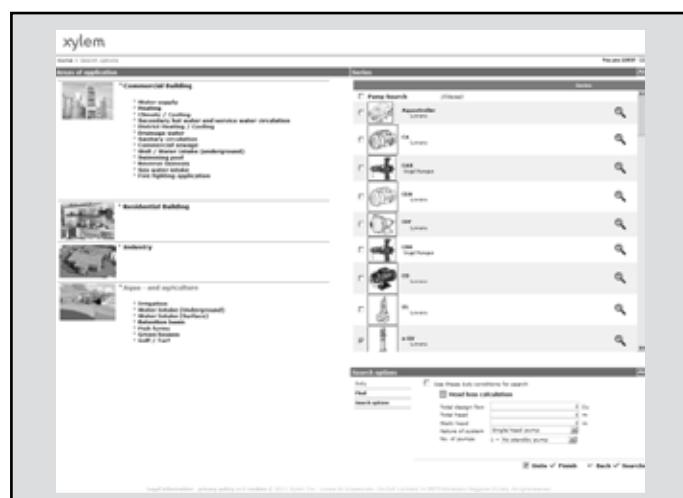

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara and Vogel products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect™ gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

## FURTHER PRODUCT SELECTION AND DOCUMENTATION

### Xylect™

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect™ is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect™ users

Every user have a My Xylect space, where all projects are saved.

For more information about Xylect™ please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're approximately 12,700 people unified in a common purpose: creating innovative solutions to meet our world's water needs. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. We move, treat, analyze, and return water to the environment, and we help people use water efficiently, in their homes, buildings, factories and farms. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise, backed by a legacy of innovation.
